

Storm Water BMPs: Burnt Vehicles

To protect the quality of our storm water, we require burnt vehicles (partially or completely burnt) to be covered under tarps during a rain event. ***It is the responsibility of all site managers to be knowledgeable about our Storm Water Best Management Practices. Please review the items below and convey them to all team members.***

Burned Vehicles Management Procedures:

- 1) Burnt out salvage vehicles at our facilities must be protected from the rain.
- 2) All burnt portions of a vehicle in the production or customer yard must be tarped. No exceptions!
- 3) Evaluate if the burnt out vehicle has value other than scrap, and if not, consider draining and crushing with no yard placement.
